The Principal Pedestrian Network Demonstration (PPND) project is funded under the Commonwealth’s Liveable Cities Program to promote walking as a means of transport to key destinations within a city’s activity area.

Frankston City Council and ASPECT Studios, in consultation with the local community and traders, have developed a great plan to promote walking between key destinations and enhance exploration of Frankston’s central laneways. The route has been identified to strengthen and prioritise north-south pedestrian access to retail outlets including Bayside Shopping Centre, local traders and the Frankston Transit Interchange.

To enhance community safety and eliminate waste dumping and graffiti, Gallery Lane will host a sequence of new lighting and art components. By incorporating Crime Prevention Through Environmental Design principles, these works will enliven the lane and support community activation and promote a safer pedestrian route.

Park Lane and the pedestrian link will receive a full street upgrade that will create a desirable place for pedestrians and local traders. New furniture, tree planting, art and lighting components will enhance the laneways between Wells Street and Young Street.

Construction will commence in February 2014.

“I am very excited about the upcoming improvement works to occur as part of the Principal Pedestrian Network Project. The route down Park Lane and through the car park is currently not safe. These improvement works will ensure these pedestrian walkways are safe and easier to navigate. The urban art work and lighting elements will also brighten up the city at night time.”

Cr Sandra Mayer, Mayor, Frankston City Council, 7 August 2013
