Immunisation

Immunisation is important for your child, family and community.

Remember:

- Immunisation helps protect everyone in the community
- Make sure you vaccinate your bubup on time
- Speak to your Council

Federal Government statement:

This project has been supported by funding from the Australian Government Department of Health under the Indigenous Australians' Health Programme.

This project acknowledges the traditional Custodians of the Kulin Nation, paying respects to Elders, past, present and emerging. Artwork by Emma Bamblett, Wemba Wemba clan and April-Lee Carter, Ngarrindjeri clan.

Stay Strong and Deadly Immunise Bubup

What is immunisation?

Immunisation is medicine that protects your bubup from diseases. The medicine is called a vaccine.

Why immunise?

Immunising your bubup keeps them safe. It gives them protection from most serious childhood diseases.

Is it safe?

Vaccines have to pass many tests before they are given to people.

Is it free?

Yes, all vaccines are funded under the National Immunisation Program unless otherwise noted.

How does it work?

Vaccines are given by needle or drinking medicine. A vaccine trains the body's immune system to fight a disease it has not come into contact with before. Vaccines are designed to prevent disease.

What happens if my child is not up to date with their vaccinations?

If you have fallen behind or missed a session, a special catch up program can be organised to ensure your child gets protected as soon as possible.

No Jab No Play – for Childcare, Early Start Kindergarten and Kindergarten

All parents/guardians enrolling their child at an early childhood service in Victoria must provide evidence that the child is fully immunised.
